The PREMIX gas bottle should be available BEFORE installation of the laser on your premises; the laser will not work without it.

We recommend that you check the cylinder gas pressure from time to time and order a new bottle of PREMIX as soon as it drops below 30 bar. You should then have about 8 weeks before the laser switches off automatically, when the cylinder gas pressure reaches < 4 bar.

Note: This information is non-binding and we do not accept any liability for parts, components, systems, materials etc., which are not supplied by RSL.
